DETAILED ACTION

Response to Amendment

1. Applicant's purported amendments to the specification, changing the German-language term "benzole sulfonic acid" to the English term "benzene sulfonic acid" to overcome Examiner's 7/10/08 objection thereto, which applicant stated were sent along with the 1/12/09 arguments and claim amendments in an "attached substitute specification[.]" have not been received by the Office. The substitute specification is absent from the file, and the only specification versions received are those dated 3/2/05, both of which containing the German-language term. **Nevertheless, this situation is mooted by Examiner's decision to sua sponte remove the objection thereto, so as to expedite the allowance process. The specification-as-originally-filed is deemed acceptable.**
2. Applicant's amendments to the claims, changing the German-language term "benzole sulfonic acid" to the English term "benzene sulfonic acid[.]" are sufficient to overcome Examiner's 7/10/08 objection thereto. *In the event that any confusion, legal challenge, or the like as to enablement or claim support within the specification arises from the presence of only "benzole sulfonic acid" in the specification and only "benzene sulfonic acid" in the claims, applicant shall be entitled to the doctrine of equivalents between the two equivalent terms. Cf. MPEP 2186.*
3. Applicant's re-numbering of the claims is sufficient to overcome Examiner's 7/10/08 objection thereto.

Allowable Subject Matter

4. Claims 19-32 are allowable as written over the prior art and do not suffer from any deficiencies under 35 U.S.C. § 101 or § 112. The following is an examiner's statement of reasons for allowance: Obayashi et al., US 4,615,991 (1986) ("Obayashi") and Friesen et al., US 6,136,222 (2000) ("Friesen") appear to be the most pertinent references of record. Regarding independent claim 19, Obayashi discloses the regeneration of iron-fouled denitration (herein "DENOX") catalysts exhibiting decreased denitrating performance and an elevated SO_2/SO_3 conversion rate by washing with aqueous sulfuric or oxalic acids at temperatures of 20-60 deg. C and pH of 0.5 to 4.0, followed by an aqueous wash, drying and re-impregnation of the DENOX catalysts with water-soluble catalytically-active materials or precursors thereof. *See* Obayashi at col. 2, ln. 40-49, col. 3, ln. 47-55, col. 7, ln. 59-68, and clms. 1-3. While Obayashi does not disclose the use of antioxidants/reducing agents in its regeneration process, this limitation is taught by Friesen, who discloses the regeneration of a transition-metal nitrogen-removing catalyst complex comprising (*inter alia*) the metal and a compound selected from the group consisting of (*inter alia*) dithiocarbonates and catecholates by treatment with aqueous hydrochloric or sulfuric acid. *See* Friesen at col. 19, ln. 28-33, 42-47, and 62-64; clms. 1 and 4.

However, independent claim 19 and all claims depending therefrom have been allowed because it would not have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Obayashi and Friesen for any or all of the following reasons: a) Friesen's catalyst is a *homogeneous* liquid- or solution-phase catalyst, consisting essentially of a solvent and a transition metal complex (*see* Friesen at col. 3, ln. 4-5), whereas applicant's catalyst is *heterogeneous*, b) Friesen's nitrogen-binding composition is

indeed not a DENOX catalyst but rather a nitrogen-binding composition, *see* Friesen at col. 4, ln. 46-57, and c) Friesen's use of dithiocarbonates and/or catecholates is as complexing agents to keep its transition metal in solution, not as antioxidants as in the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
